6th Class Soci ns and Answers

Improve Your Learning

Question 1.
How does a planet differ from a star?
Answer:
Stars have their own heat and light and planets have to depend on stars for light and heat.

Question 2.
What is meant by the 'Solar system'?
Answer:
The eight planets which revolve around the sun, satellites and other celestial bodies are together known as'Solar System'.

Question 3.
Why is life not possible on all planets?
Answer:
The Earth has all the three components such as lithosphere, hydrosphere and atmosphere which makes life possible. The remaining planets do not consist of these components. So life is not possible on all planets.

APBoardSolutions.Guru

Question 4.
Why do we always see only one side of the moon?
Answer:
The moon moves around the earth and spin on its own also. So we can see only one side of the moon always.

Question 5.
What is the Universe?
Answer:
Millions of Milkyway galaxies including the solar system together is called the Universe.

Question 6.
Air and water are essential to life on the earth. But now they are being polluted by humans. What happens to the life of humans on this earth if pollution increases further?
Answer:
Pollution contains toxins that adversely impact living creatures within them. Rising pollution will lead to premature aging. Human exposure to toxins will increase to a great extent if pollution is not controlled. This pollution is directly linked to cancer and heart diseases.

Question 7.
Scientists are now trying to explore more about the moon and other planets. Do you think their efforts benefit us?
Answer:
The efforts of scientists in exploring the moon and other planets definitely useful to us. Space exploration alone provides us a significant amount of knowledge which is important for the education of people also about our planet and universe. It increases the knowledge about space and the discovery of distant planets and galaxies and gives us an insight into the beginnings of our universe.

Question 8.
Observe figure 1.4 (text book Page No. 5) and fill in the table.

Sl.No	Na

Answer:

Sl. No	Name of the Planet	Distance from the Sun in Kilometres	No. of Moons
1.	Mercury	58,000,000	—
2.	Venus	108,000,000	—
3.	Earth	150,000,000	1
4.	Mars	228,000,000	2
5.	Jupiter	778,000,000	79
6.	Saturn	1,427,000,000	82
7.	Uranus	2,869,000,000	27
8.	Neptune	4,496,000,000	14

Project Work

Prepare a model of the solar system.
Answer:
Student Activity.

Choose the correct answer.

1. Though tremendous heat is emitted by the Sun, why do we receive only limited heat?
A) Sun is very far from the Earth
B) Sun is very small when compared with the Earth
C) Sun is very close to the Earth
D) None of these
Answer:
A) Sun is very far from the Earth

2. The planet is known as the "Earth's Twin" is
A) Jupiter
B) Saturn
C) Venus
D) Aries
Answer:
C) Venus

3. Which is the third nearest planet to the sun?
A) Venus
B) Earth
C) Mercury
D) Jupiter
Answer:

4. All the planets r
A) Circular path
B) Rectangular pa
C) Elongated path
D) Square path
Answer:
C) Elongated path

5. Asteroids are found in between the orbits of
A) Saturn and Jupiter
B) Mars and Jupiter
C) The Earth and Mars
D) Uranus & Neptune
Answer:
B) Mars and Jupiter

APBoardSolutions.Guru

Match the following:

1. Blue Planet	[ ]	a) Mars
2. Farthest Planet to Sun	[ ]	b) Neptune
3. Fourth Planet from Sun	[ ]	c) Mercury
4. Nearest Planet to Sun	[ ]	d) Earth

Answer:

1. Blue Planet	[D]	a) Mars
2. Farthest Planet to Sun	[B]	b) Neptune
3. Fourth Planet from Sun	[A]	c) Mercury
4. Nearest Planet to Sun	[C]	d) Earth

Let's do

Solve the puzzle with the terms defined in the following statements.

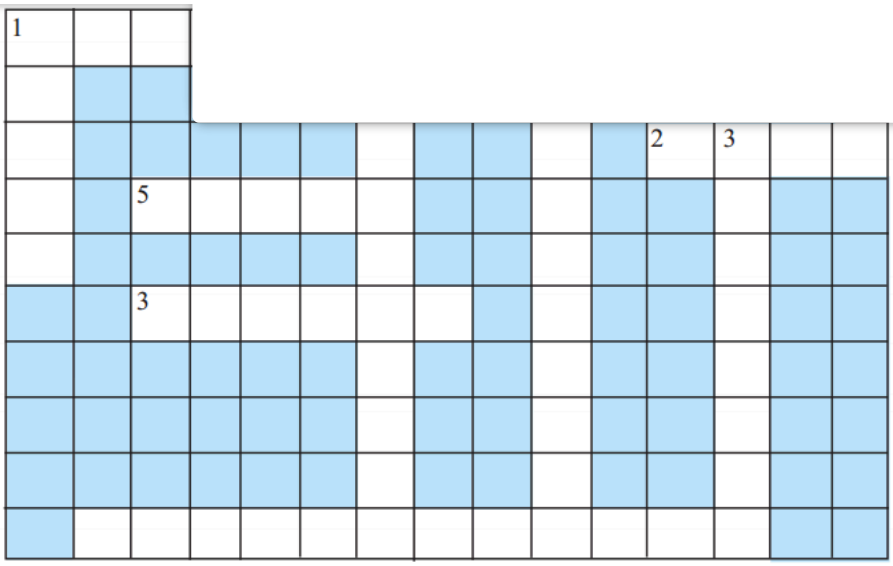

CROSS:

1. The cluster of millions of Stars. – Galaxy
2. The natural satellite of the Earth. – Moon
3. The ringed planet (See figure 1.4). – Saturn
4. The sphere of water. – Hydrosphere
5. The celestial object is made up of a head and a tail. – Comet

DOWN:

1. The shape of the Earth. – Geoid
2. The closest star to the earth. – Sun
3. The path of the planets that move around the Sun. – Orbit
4. The sphere of gases that surrounds the Earth. – Atmosphere
5. The small pieces of celestial bodies, move around the Sun between Mars and Jupiter.

Let's do

You might have heard that people make human chains and run for world peace etc. You can also make a Solar system and run for fun by using the following steps.
Step – 1: All children of your class can play this game. Assemble in a big hall or on a playground.
Step – 2: Now draw eight circles on the ground. Draw all circles in the same manner.
Step – 3: Prepare 10 placards. Name them as Sun, Moon, Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune.
Step – 4: Select 10 children in the following order and give each one of them a placard.
Order of placard distribution

- The Sun – tallest, The Moon – smallest; Mercury, Mars, Venus, and Earth(almost equal heights); Neptune, Uranus, Saturn, and Jupiter taller than the earlier four Planets but smaller than the Sun.
- Now ask the children holding placards to take their places with the Sun in the cent rein their orbits. Ask the child holding the Moon placard to keep the hand of the child holding the Earth placard always.
- Now your Solar system is almost ready to go into action.
- Now make everybody move slowly in the anti-clockwise direction. Your class has turned into a small human replica of the Solar system.
- While moving in your orbit you can also turn around. For every celestial body, the spin should be anti-clockwise

Let's Do

(Textbook Page No. 3)

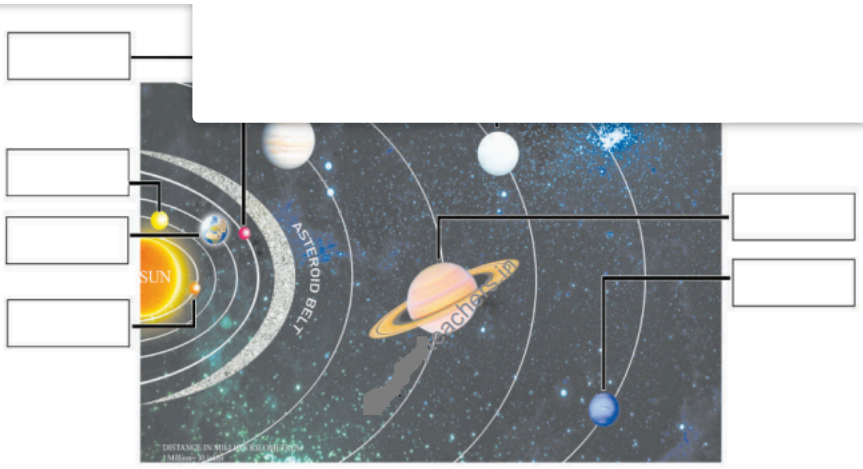

Question 1.
To know how days and nights occur
Answer:
Let us observe celestial bodies:
Required material: Torch, a sheet of plain paper, pencil and a needle.
Process:

1. Place the torch in the centre of the paper with its glass front touching the paper.
2. Now draw a circle around the torch.
3. Perforate the paper with the needle within the circled area.
4. Now place the perforated circle part of the paper on the glass front and wrap the paper around the torch with a rubber band.
5. In a dark room, stand at some distance facing a plain wall. Switch off all other lights. Now flash the torchlight on the wall. You will see numerous dots of light on the wall, which look like stars at night.
6. Switch on all the lights in the room. All dots of light will be almost invisible.
7. You may now compare the situation with what happens to the bright objects of the night sky after the Sun rises in the morning.

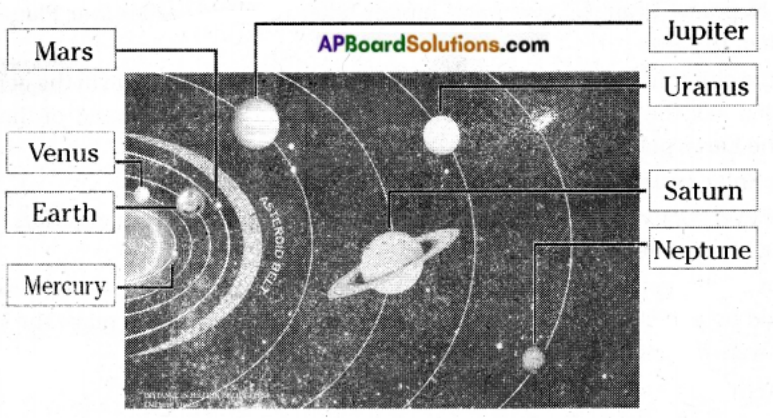

Answer:
Student Activity.

Question 2.
Observe the following picture and name the planets in the boxes given below. (Textbook Page No. 6)

Think and Respond

Question 1.
From ancient times people worship the Sim as God. Give reasons. (Textbook Page No. 4)
Answer:
Sun is glorified in the Vedas of ancient India as an all-seeing god who observes both good and evil victims. The Sun is the source of all life on our planet. Without the Sun we couldn't be here. Sun is the only natural source of energy. So people in ancient times treated the Sun as a god and we worship him.

Question 2.
What do animals and plants require in order to grow and survive? (Textbook Page No. 6)
Answer:
To grow and survive animals need air, water, food and shelter. To grow and survive plants require air, water, nutrients and light.

Question 3.
How can you say that our earth is a unique planet in the solar system? (Textbook Page No. 7)
Answer:
Earth is a unique planet for many reasons. They are:

1. Earth is the only planet that supports animal or plants life.
2. Earth's location maintains the right temperature which is important for life forms.
3. Human beings in-universe is found only on the Earth,

Question 4.
How is man-made
Answer:
A satellite is an object that orbits another object. They are natural and man-made. Moon is a natural satellite of the Earth. Satellites are used for many purposes. They are weather satellites, communication satellites, navigation satellites, astronomy satellites and many other kinds.

1. They are used for communication purposes.
2. Carry instruments or passengers to perform experiments in space.
3. For weather forecasting system.
4. For global positioning system. (GPS).

Question 5.
Can you relate yourself to the Universe now? You are on the Earth and the Earth is a part of the Solar system. Our Solar system is a part of the Milky Way or Galaxy which is part of the Universe. Think of the fact that the Universe contains millions of such galaxies. How do you fit in the picture? How tiny you are? Think a while. (Textbook Page No. 11)

Question 2.
Up to 2006, there were 9 planets in our Solar system. But now we have only 8 planets. What was the 9th planet? What happened to it? Find out the reasons with the help of your teacher? (Textbook Page No. 6)
Answer:
Up to 2006, we considered there are 9 planets in our solar system.
They are:

1. Mercury,
2. Venus,
3. Earth,
4. Mars,
5. Jupiter,
6. Saturn,
7. Uranus,
8. Neptune,

Question 3.
Who is the first Indian astronaut to go into space? (Textbook Page No. 8)
Answer:
Rakesh Sharma was the first Indian Astronaut to travel into space. He was part of the Soviet Union's Soyuz T-11 expedition, which was launched on April 2, 1984.

APBoardSolutions.Guru

Question 4.
Have you heard of Chandrayan-1 and Chandrayan-2? Try to know about them and discuss in class. (Textbook Page No. 8)
Answer:
Chandrayaan is India's moon mission. Chandra means the moon and yarn is a vehicle. Chandrayaan means Lunar Space Craft.
Chandrayaan -1 was India's first moon mission. Chandrayaan -1 was launched in 2008 from Satish Dhawan Space Centre, Sriharikota.
Chandrayaan – 2 is the second moon mission developed by the Indian Space Research Organisation. It was launched in September 2019 from Satish Dhawan Space Centre, Sriharikota.
