Suggested Project

Question 1.
Prepare a diet chart to provide balance diet to a twelve-year-old child. The diet chart should include food Items which are not expensive and are commonly available in your area.
Answer:
Diet plan for 12-year-old child;
Morning breakfast:

- Oats with curd (Oats are good source of minerals and curd contain proteins).
- Any two fresh fruits including apple, papaya, banana, mango, oranges.
- Boiled egg I omelette (Eggs are a good source of protein and natural fats).
- Milk (Rich source of vitamins and minerals)

Afternoon Lunch

- Two full cups rice (Carbohydrate rich)
- Leafy vegetable dal (Rich source proteins and vitamins).
- Seasonal vegetable curry with ghee (Rich in fibres and fat).
- Curd rice and juice (Rich sources of vitamins and fibre).

Evening snacks: Fruit salad and fried corn.
Night Dinner: Two cups of steamed rice, seasonal vegetable curry, curd rice.
Incorporating all the above in the diet makes the diet balanced.

Question 2.
We have learnt that excess intake of fats is harmful for the body. What about other nutrients ? Would it be harmful for the body to take too much of proteins or vitamins in the diet ? Read about diet related problems to find answers to these questions and have a class discussion on this topic.
Answer:

- If we take a high quantity of fat, there is higher chances of getting obesity. It leads to many health problems like cardio vascular, renal and high blood pressure etc.
- Water soluble vitamins do not cause any effects as they send out of the body through water.
- But, fat soluble vitamins like vit A, D, E, K accumulate inside the body and lead to health problems.

Question 3.
Test the food usually eaten by cattle or a pet to find out which nutrients are present in animal food. Compare results obtained from the whole class to conclude about balanced diet requirements for different animals.
Answer:

Name of the animal	Food, the animals eat
1) Cow, buffalo	Grass, bil cake, hay, cotton seeds, vegetables
2) Cat	Small animals, birds, milk
3) Rat	Grains, seeds, food items
4) Tiger	Meat of other animals
5) House lizard	Small insects

6) Human being	
7) Butterfly	

There are different species having different nutrition modes. Few species have a digestive system that is well evolved to digest their food. The food is broken down into smaller particles and transported to various parts of the body. The undigested food is eliminated through their excretory organs.

Question 1.
Collect the information of some common meals of different regions/states. Some common meals of different regions/states

Region/ State	Item of grain	Item of *dal*/meat	Vegetables	Others
Punjab	*Makki* (corn) *roti*	*Rajma* (Kidney beans)	*Sarson saag* (Mustard leaf curry)	Curd, *ghee*
Andhra Pradesh	Rice	*Tuar dal* and *rasam* (*charu*)	*Kunduru* (*dondakai*)	Buttermilk, *ghee*, pickle (*aavakai*)
		APBoardSolutions.com		

Answer:

Region/State	Item of grain	Item of dal/meat	Vegetables	Others
Punjab	Makki (Corn) roti	Rajma (Kidney beans)	Sarson Saag (Mustard leaf curry)	Curd, ghee
Andhra Pradesh	Rice	Tuar Dal and rasam (Charu)	Kunduru (Dondakai)	Buttermilk, ghee, pickle (Aavakai)
Rajasthan	*Wheat*	*Moong and chana*	*Potato, beans, tomato*	*Buttermilk, curd, kheer*
Gujarat	*Wheat and rice*	*Besan*	*Potato, brinjals, radish, tomato*	*Malai, butter-shake*
Maharashtra	*Wheat*	*Besan*	*Potato, onion, carrot, beet-root*	*Sauce*
		APBoardSolutions.com		
Bihar	*Wheat*	*Chana*	*Tomato, palak, potato, onion*	*Buttermilk, curd*
West Bengal	*Rice*	*Fish*	*Potato, Palak, onions*	*Buttermilk*
Tamilnadu	*Rice*	*Meat*	*Sambhar, rasam*	*Sauce, buttermilk*

Activity – 2

Question 1.
How do you test the presence of starch in the given food item in your science laboratory?
Answer:

- Take a small quantity of a food item or a raw ingredient.
- Put 2-3 drops of dilute iodine solution on it.
- Observe if there is any change in the colour of the food item.

Join Teaching Jobs WhatsApp Group

Observation: The food item turns blue-black colour indicates that it contains starch and repeat this test with other food items to find out which of these contain starch. Enter all your observations in a table.

Question 2.
How do you test the presence of protein in the given food item ?
Answer:

- Take a small quantity of a food item for testing.
- If the food item is solid, mash a small quantity of the food item.
- Put some of this in a clean test tube add 10 drops of water to it and shake the test tube.
- Now, using a dropper, add two drops of solution of copper sulphate and ten drops of solution of caustic soda to the test tube.
- Shake well and let the test tube stand for a few minutes.

Observation : A violet colour is appeared in the test tube. This indicates the presence of proteins in the food item. Repeat this on other food items and enter your observations in a table.

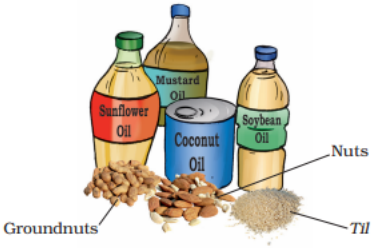

Question 3.
How do you test the presence of fats in a given food item ?
Answer:

- Take small quantity of a food item like butter or ghee and put on the brown paper.
- Then rub over it. Let the paper dry for a while. If there were any water that may have come from food, it would dry after some time.
