Foreword

The National Curriculum Framework (NCF), 2005, recommends that children's life at school must be linked to their life outside the school. This principle marks a departure from the legacy of bookish learning which continues to shape our system and causes a gap between the school, home and community. The syllabi and textbooks developed on the basis of NCF signify an attempt to implement this basic idea. They also attempt to discourage rote learning and the maintenance of sharp boundaries between different subject areas. We hope these measures will take us significantly further in the direction of a child-centred system of education outlined in the National Policy on Education (1986).

The success of this effort depends on the steps that school principals and teachers will take to encourage children to reflect on their own learning and to pursue imaginative activities and questions. We must recognise that, given space, time and freedom, children generate new knowledge by engaging with the information passed on to them by adults. Treating the prescribed textbook as the sole basis of examination is one of the key reasons why other resources and sites of learning are ignored. Inculcating creativity and initiative is possible if we perceive and treat children as participants in learning, not as receivers of a fixed body of knowledge.

These aims imply considerable change in school routines and mode of functioning. Flexibility in the daily time-table is as necessary as rigour in implementing the annual calendar so that the required number of teaching days are actually devoted to teaching. The methods used for teaching and evaluation will also determine how effective this textbook proves for making children's life at school a happy experience, rather than a source of stress or boredom. Syllabus designers have tried to address the problem of curricular burden by restructuring and reorienting knowledge at different stages with greater consideration for child psychology and the time available for teaching. The textbook attempts to enhance this endeavour by giving higher priority and space to opportunities for contemplation and wondering, discussion in small groups, and activities requiring hands-on experience.

The National Council of Educational Research and Training (NCERT) appreciates the hard work done by the Textbook Development Committee responsible for this textbook. We wish to thank the Chairperson of the advisory group in Science and Mathematics, Professor J.V. Narlikar and the Chief Advisor for this textbook, Dr. H.K. Dewan for guiding the work of this committee. Several teachers contributed to the development of this textbook; we are grateful to their principals for making this possible. We are indebted to the institutions and organisations which have generously permitted us to draw upon their resources, material and personnel. We are especially grateful to the members of the National Monitoring Committee, appointed by the Department of Secondary and Higher Education, Ministry of Human Resource Development under the Chairpersonship of Professor Mrinal Miri and Professor G.P. Deshpande, for their valuable time and contribution. As an organisation committed to the systemic reform and continuous improvement in the quality of its products, NCERT welcomes comments and suggestions which will enable us to undertake further revision and refinement.

Foreword

"Without Mathematics, there's nothing you can do. Everything around you is mathematics. Everything around you is numbers" - Shakuntala Devi

India has a rich tradition and several contributions to Mathematics, since ancient times and the legacy has continued over generations by various means. Mathematics provides an effective way of building mental discipline and encourages logical reasoning and mental rigor. Besides this, mathematical knowledge also plays a crucial role in understanding the Content of other School Subjects in the School.

The New Educational policy (NEP), 2020, provides a platform to build, nurture, foster, encourage and multiply mathematical thinking. It's introduced the reforms needed to balance the need for 21st century employment and entrepreneurship, which is marked by critical, lateral and mathematical thinking.

As efforts are made in preparing high-quality bilingual text books and teaching-learning materials for Mathematics, so that the students are enabled to think and speak about the subject both in their home language / mother tongue and English .

The State council of Educational Research and Training (SCERT), Andhra Pradesh (A.P.) has been adopting the National Council of Educational Research and Training (NCERT) Curriculum in the State Starting from the Academic year 2022-23, for the class VIII and now, it is for the class VI in this academic year, 2023-24, with the sole aim of preparing the Government School Students, hailing from even a very backward area, to compete on par with any corporate School student in this Competitive world.

We are thankful and indebted to our Honourable chief Minister Sri Y. S. Jagan Mohan Reddy who is committed for systematic reforms and continuous improvement in quality education, in order to groom and see our students, as Global Citizens,

We extend our gratitude to our Hon'ble Minister for Education, Sri Botcha Satyanarayana for his continued support in this endeavour. Our special thanks to Sri Praveen Prakash, IAS, Principal Secretary to Government, Department of School Education, A.P., Sri. S. Suresh Kumar, IAS, Commissioner of School Education and Ms. Nidhi Meena IAS, Special officer, English Medium Project, A.P., for their constant motivation and guidance.

We convey our sincere thanks to the translators who've carried out the translation work of NCERT VI class mathematics textbook, content into Telugu Language. We also thank our Subject Co-ordinators and DTP and Layout designers for their contribution for the development of this textbook. We invite Constructive feedback from the teachers, parents and Educationalists for further improvement of the text book, in the interest of students' community.

"Teaching Mathematics is a journey, not a destination" Keep going ahead.

Rationalisation of Content in the Textbooks

In view of the COVID-19 pandemic, it is imperative to reduce content load on students. The National Education Policy 2020, also emphasises reducing the content load and providing opportunities for experiential learning with creative mindset. In this background, the NCERT has undertaken the exercise to rationalise the textbooks across all classes. Learning Outcomes already developed by the NCERT across classes have been taken into consideration in this exercise.

Contents of the textbooks have been rationalised in view of the following:

- Overlapping with similar content included in other subject areas in the same class
- Similar content included in the lower or higher class in the same subject
- Difficulty level
- Content, which is easily accessible to students without much interventions from teachers and can be learned by children through self-learning or peer-learning
- Content, which is irrelevant in the present context

This present edition, is a reformatted version after carrying out the changes given above.
